TransPac®

UN Rated Cylindrical FIBC

PacTec has created a cylindrical version of its' popular TransPac® FIBC. Carrying a "Y" UN-Rating, this is an ideal packaging solution for the transport and disposal of many hazardous wastes. Our proprietary design is the first in the industry to utilize a zipper closure for ease of use in the field.

This FIBC offers many advantages over rigid IBCs, in that it occupies less storage space than oversized containers and several can fit on a single pallet. Plus, this heavy-duty, multi-layer bag includes a full absorbent inner layer and is also lightweight, compact and easily stored on service trucks.

Applications:

- ▶ Pole-Mounted Transformers
- 37.5 kVA, 50 kVA, Small 75 kVA
- ▶ VOC containment
- ▶ Spent Carbon Canisters
- ▶ Safe transport of PCB's
- ▶ Storm Preparedness

Features:

- ▶ "Y" UN Rating for Pkg Group II
- ▶ DOT Compliant
- ▶ Patented* zipper closure
- ▶ Bright white bag with reflective striping for safety
- ▶ Integrated industrial lifting straps

Advantages:

- ▶ More economical than metal drums
- ▶ Self-supporting material holds bag open for easy, one-person loading
- ▶ Fully lined with absorbent material for maximum spill control
- ▶ Lightweight and compact

Quality Assurance is a top priority for PacTec.

Our reputation is built on it. Our ISO 9001:2015 certification confirms it.

Innovative design, customized solutions and rigorous testing are a part of every thing we do at PacTec.

Take advantage of our years of experience in packaging and transportation and call or connect with us online.

We manufacture packaging. We engineer solutions.
